Upload HCM Lite to GitHub and submit

You need to submit **two links** on lms.saylaniit.com. One is already done for you:

1. Hosted (live) link	**https://hcm-lite-phi.vercel.app** Done - already online.
2. GitHub repository link	You create it with the steps below (about 10 minutes).

Do not complete setup on the live link before judging

Opening the live link shows **Set up your company**. Leave it like that - the judges create the company themselves. Setup can only be done once on that website.

Step 1 - Unzip

1. Right-click **HCM-Lite.zip** -> **Extract All...** -> choose your Desktop -> **Extract**.
2. You now have a folder **HCM-Lite** containing folders like **src**, **prisma** and files like **README.md** and **package.json**.

Step 2 - Publish with GitHub Desktop (easiest, no commands)

1. Go to **desktop.github.com** -> **Download** -> install it.
2. Open GitHub Desktop -> **Sign in to GitHub.com** -> sign in with **your** GitHub account (create one free at github.com if needed).
3. Menu **File** -> **Add local repository...** -> **Choose...** -> select the **HCM-Lite** folder from Step 1 -> **Add repository**.
4. It says *"This directory does not appear to be a Git repository"*. Click the blue link **create a repository**.
5. Name: **hcm-lite**. Leave **Git ignore: None** and **License: None** (the project already has them). Click **Create repository**.
6. Click **Publish repository** (top bar). Name: **hcm-lite**. **Untick "Keep this code private"** so the judges can see it. Click **Publish repository**.
7. Menu **Repository** -> **View on GitHub**. Your browser opens the repository. Copy the address, e.g. **https://github.com/YOUR-NAME/hcm-lite** - this is link 2.

Check on GitHub: you should see the folders **prisma**, **public**, **src**, **tests** and the file **README.md** (which shows the live link at the top).

Why not just drag the files onto the GitHub website?

The website accepts at most **100 files per upload**, and this project has about 180 (the **src** folder alone has 152). Splitting it by hand easily breaks the folder structure. GitHub Desktop uploads everything in one go with the right structure, and never uploads the zip itself. If GitHub Desktop is impossible, ask for help rather than uploading part of the project.

Step 3 - Submit on the LMS

1. Log in to **lms.saylaniit.com** with your student account.
2. Open the hackathon submission and paste:
   - Repository link: **https://github.com/YOUR-NAME/hcm-lite**

- Hosted link: **https://hcm-lite-phi.vercel.app**

3. Submit.

For the demo

Read **HCM_Lite_Project_Guide.pdf** (in the same folder). Section 3 has the 5-minute demo as a step-by-step table: Admin sets up the company -> creates an HR login -> HR registers employees -> employee checks in and applies for leave in plain words -> HR approves -> payroll -> Admin finalizes -> employee downloads the payslip -> Admin shows the audit log. Use a normal window for Admin, an incognito window for HR and another browser for the employee.

You do **not** need to install Node.js or a database to submit - the live link already runs the app. Only if you want to run it on your own computer, follow "Run it locally" in README.md.
